INTRODUCTION

The Korean General Social Survey (KGSS) conducted by the Sungkyunkwan University Survey Research Center was established in 2003 to gauge social changes and the stability of Korean society. The Korean General Social Survey is a Korean version of the General Social Survey (GSS) of the United States. Like the GSS, the KGSS is a large academic survey database. Researchers can download KGSS cumulative data and documentation from the KGSS website (<http://kgss.skku.edu>).

The KGSS comprises four parts: The first part includes replicating core questions that cover the core content of Korean society. The second part is the International Social Survey Program (ISSP) module, which is a cross-national survey of 43 countries from all over the world (<http://www.issp.org>). The third part is the East Asian Social Survey (EASS) module. The EASS is a joint survey of four East Asian countries (Korea, Japan, China and Taiwan) conducting a GSS-type social survey (<http://www.eassda.org>). Sungkyunkwan University Survey Research Center conducted the EASS. An exception was in 2016 and 2018, when it was undertaken jointly by the Sungkyunkwan University Survey Research Center and the Seoul National University Social Development Institute. The last part contains modules proposed by researchers.

The high quality of the KGSS is upheld through the efforts to maintain methodological rigor: (1) Representativeness: The KGSS is faithful to the survey principle that the representativeness of respondents is more important than the number of respondents. (2) Repeatability: The cumulative nature of the repeated survey of the core items of the KGSS is very important for studying both the stability of and the changes in Korean society.

DATA

The KGSS samples men and women aged 18 and over nationwide based on the multi-stage area probability sampling method. It is conducted by a person-to-person interview. The KGSS has a relatively high response rate compared to other surveys while maintaining strict probabilistic sampling principles. The number of respondents per year and the response rate were as follows: 2003 (1,315) (66%); In 2004, 1,312 (66%); 1,613 in 2005 (65%); 1,605 (64%) in 2006; In 2007, 1,431 (57%); 1,507 (60%) in 2008; 1,599 (64%) in 2009; 1,576 (65%) in 2010; 1,535 (61%) in 2011; 1,396 (56%) in 2012; 1,294 (52%) by 2013; 1,370 (55%) by 2014; 1,051 (47%) in 2016; 1,301 (43%) in 2018.; 1,205 (50%) in 2021.

The 2003–2021 Cumulative KGSS are updates of the 2003–2018 cumulative data. Since the value of repeated cross-national surveys can be maximized when they are pooled, the first 2003–2013 cumulative data were created using the previously published yearly data in 2016.

In the process of harmonizing each year's files, if the variable name is the same as the other variable in the existing published data, the variable name is newly assigned in the cumulative data set (e.g. in the case of 2013 variable, INTERNET, is changed to INTRNT13 in the cumulative data). In this case, two variable names (yearly data variable name and cumulative data variable name) were provided in the questionnaire included in the codebook. While we combined 2021 KGSS and 2003–2018 cumulative data, we have corrected any errors published in yearly data. We recommend that users use the recent cumulative data (version 1), which is updated from time to time on our homepage, kgss.skku.edu

Below is a table showing the cumulative data collection for the users of the data collection.

Table 684 Trust on leaders of the Blue House

[Questionnaire] I am going to name some institutions in this country. As far as the people running these institutions are concerned, would you say you have a great deal of confidence, only some confidence, or hardly any confidence at all in them?... The Blue House

* SHOW CARD(05–21)

*** Keyword: Social Institution, Trust, The Blue House

The table consists of title, item information, frequencies, availability of show cards, and changes in question or response categories. The title of the table shows the serial number and a brief description of the question, and below it shows the total questionnaire item and variable name. The frequency table lists the response categories and corresponding variable values, and the distribution of responses in the years from 2003 to 2021 when the items were examined. Due to the space limitation, we collapsed 2003, 2004, 2005, and 2006 year into 2003–2006. Percentages shown in the table were calculated by including both missing and not applicable cases. The frequency figures were expressed in percentages, up to one decimal place. Because it is rounded to the second digit, it is sometimes marked as 0 (for example, 0 for 0.04%). At the bottom of the frequency table, there are total number of respondents (N) responding each year, so you can see how many people responded to the corresponding response category with distribution and number of respondents. The current tables show weighted percentages, but the tables in the previous codebook were unweighted percentages.

Other items include show cards, changes in survey questions and response categories, and keywords. If a show card is provided for an item (show cards were provided for all questions in 2018 and 2021), it is noted in the annotation, and if no show cards are available for all the years examined, only the year in which the show card is provided is added. Yes, “05–21” means that a viewing card was provided from 2005 to 2021, and a viewing card was not provided to respondents in 2003 and 2004. Even if the same variable name was used, all of the question items and the response categories were recorded so that differences could be compared. Finally, we tried to make keywords as borrowed as possible from the words used in the questionnaire, but sometimes they are not. In addition, if the keyword is found in the index of the cumulative data base, other variables corresponding to the same keyword can be identified.

The appendix includes a bibliography using Appendix 1, the KGSS bibliography, Appendix 2, variables by year, which can be used to identify which year a specific variable was asked, and Appendix 3, the subject index.

Without the generous support of Sungkyunkwan University and the National Research Foundation of Korea(NRF- 2020S1A3A2A03096777), the KGSS would never have been possible.

Survey Contents

1. Survey Contents

The Korean General Social Survey (KGSS) is the South Korean version of the General Social Survey (GSS). The KGSS is conducted by organically integrating Repeated Core Research, ISSP Topical Module Research, EASS Topical Module Research, and Researcher Suggested Module every year as needed. Through this survey, it was possible to study various fields of Korean society, study of social science research methodology, research on Korean social change and cross-national comparative survey academically, and it is utilized in all fields of society and widely used as educational material. The nature and content of each investigation will be described in detail as follows.

1) Repeated Core Survey

The Repeated Core Survey is the item that is repeatedly asked every year. The questionnaire consists of about 140 items to grasp the socio-demographic background variables as well as key elements of political economy and society. This questionnaire identifies the stability and volatility of Korean society by repeatedly and continuously investigating major social issues with academic significance.

The following are the specific repeating core questionnaires item by item.

(1) Political questions: National pride(KRPROUD 2003-2021), Political orientation (PARTYLR 2003-2021), Satisfaction on the current Korean politics (SATPOL 2003-2014, 2018-2021), Prospect on South Korean politics (POLPROS 2004-2014), Supporting political party (PRTYID 2003-2021), Preferring political party (PRTYPR 2003-2009, 2013-2021), Assessment on the current government's state affair administrations (CURGOV 2003-2018)

North Korea · National unification issue

View on North Korea NORTHWHO 2003-2021

Admitting the North Korean defectors NKACCEPT 2011-2016

Need for unification between South and North Korea UNIFI 2003, 2006-2021

(2) Economic questions: Satisfaction on the current economic state of Korea SATECO 2003-2008, 2011-2014, Prospect on the economic situation in South Korea ECOPROS 2003-2014

(3) Social questions:

Social trust and fairness

Assessment on fairness of most people FAIR 2003, 2005, 2007-2009, 2011-2021

Trustworthiness of the society RELIABLE 2004-2009, 2011-2014, 2018-2021

Trust on people CANTRUST 2004, 2007-2008, 2010-2012, 2014-2021

Trust on most people TRUST 2003, 2005-2006, 2009, 2013-2014

Trust in leaders who lead social groups (2003-2021)

Leaders of major companies CONBUS,

Leaders of the congress CONLEGIS,

Leaders of the Supreme Court CONJUDGE,

Leaders of the academic community CONSCI,

Leaders of the military CONARMY,

2) Cross-National Comparative Survey

The Korean General Social Survey (KGSS) has participated in ISSP and EASS, allowing cross-national and cross-cultural comparative research.

(1) ISSP Topical Module Investigation

The ISSP is a cross-national collaboration programme conducting annual surveys on diverse topics relevant to social sciences. Established in 1984, the ISSP has since included members covering various cultures around the globe, and by 2021, it has 43 participating countries. The ISSP regularly responds to current developments in social sciences by including new topics or developing new modules. Members of the Organization shall jointly determine and investigate survey topics and questionnaires at the annual general meeting. There are about 10,576 publications based on the ISSP and the ISSP is one of the most important data sets for cross-national and cross-cultural research.

Sungkyunkwan University East Asia Academy Survey Research Center was officially designated as a representative member organization in Korea at the ISSP General Meeting in 2003 and collected data from the national identity module in 2003. There are 11 subject modules that ISSP has developed so far (see <Table 1>).

<Table 1> ISSP Topical Module Research, 1985 - 2021

ISSP Subject Module	ISSP Subject Module Year					Years of Korea's participation	
Role of Government	1985	1990	1996	2006	2016	2006	2016
Social Networks and Social Resources	1986	2001	2017				
Social Inequality	1987	1992	1999	2009		2009	
Family & Changing Gender Role	1988	1994	2002	2012		2012	
Work Orientations	1989	1997	2005	2015		2005	
Religion	1991	1998	2008	2018		2008	2018
Environment	1993	2000	2010	2020		2010	2021
National Identity	1995	2003	2013			2003	2013
Citizenship	2004	2014				2004	2014
Leisure Time & Sports	2007					2007	
Health	2011					2012	

* In 1986, the module name of Social Networks and Support Systems was used. In 2001, the name of the Social Networks II was used.

Recent and future topics include health and health protection in 2021 and family and gender roles in 2022. Except for leisure and sports, all of these modules have already been cyclically investigated 2-5 times every few years (approximately 5-10 years). Circulated modules typically include about two-thirds of the questions in the previous modules. The introduction of new questions or modification of existing ones is determined by in-depth discussions among Member States based on the emerging social and academic significance. Since ISSP has designated 11 modules in total by 2021, these modules will be rotationally used every 10 years unless some new modules are accepted.

By repeatedly investigating subject modules with the interval of few years, ISSP produces data that can analyze fluctuations of the world in terms of national or intercontinental comparisons. Each of the main subject module of ISSP, 「Health and Health Protection」 and 「Family & Changing Gender Role」 specifically covers.

① 2021 「Health and Health Protection II」 Module

Health status, health behaviors, faith in health, health insurance, access and utilization of healthcare services rights to health protection, trust in the health protection system, satisfaction with the health protection system, attitudes toward vaccines, and COVID-19, etc.

② 2022 「Family & Changing Gender Role V」 Module

Attitudes toward women's work, roles distribution between men and women, attitudes toward parenting, attitudes about marriage and divorce, divorce preferences, care for relatives, work-life balance, sharing household chores, and attitudes toward women in leadership roles, etc.

(2) EASS Topical Module Research

The EASS was initiated by Korea in 2003 to promote the comparative study of East Asia among the institutions of four countries (Korea, Japan, China, Taiwan) conducting social survey in the form of General Social Survey (GSS) in East Asia. EASS has conducted five surveys (see <Table 2>).

After the establishment of EASS, the Survey Research Center has been playing a leading role as a data archiving organization that builds data and spreads it around the world through the process of cleaning, integrating and harmonizing EASS materials on behalf of EASS as a whole (EASSDA, <http://www.eassda.org/>).

<Table 2> EASS Subject Module Research, 1985 – 2021

EASS Subject Module	EASS Subject Module Year		Years of Korea's participation	
Family in East Asia	2006	2016	2006	2016
Globalization & Culture in East Asia	2008	2018	2008	2018
Health in East Asia	2010	2020	2009	2021
Network Social Capital in East Asia	2012		2012	
Work Life in East Asia	2015			

The total number of applications for EASSDA so far is 4,393, and the number of applications per module by country is as follows: (1) Application Status by Country: Requested to use materials in various countries and regions including 1,493 cases in China, 566 cases in Korea, 525 cases in Japan, 403 cases in the United States, 236 cases in the UK, 231 cases in Taiwan, 135 cases in Hong Kong. (2) Application status by module: family (2006) 1,121 cases, culture (2008) 1,112 cases, health (2010) 994 cases, social networks (2012) 835 cases, work life (2015) 133 cases, family (2016) 97 cases, unknown 101 cases.

Survey Methods

The Survey Research Center has endeavored to steadily improve the quality of the KGSS over the last 20 years. To generate trustworthy research results using KGSS data, data representativeness and reduction of overall survey errors are both necessary. To produce quality data, KGSS researchers and data managers continually work to prevent and correct problems arising from the current survey process, utilizing knowledge and experiences of earlier surveys.

1) 2003 - 2021 Sample Design

2003 - 2014

(1) Sample Selection

The KGSS population consists of non-institutionalized residents in Korea who are 18 years of age or older and who can communicate in Korean. The sample size of the first (2003) and the second (2004) surveys was 2,000 but it was increased to 2,500 with the third (2005) survey to reduce standard errors and increase effective sample sizes. Between 2003 and 2005, data from the Ministry of the Interior and Safety was utilized instead of constructing sampling frames of households. The sample was selected using a multi-stage area probability sampling method. This method selects clusters with probability proportional to size (PPS) within stratum at each stage, and details are as follows:

- 1) After determining the number of primary sampling units (PSUs –Dong/Eup/Myun) as 200 and allocating the 200 to each Si/Do based on “Resident Registry Statistics”, the allocated number of PSUs was randomly selected from each Si/Do with the PPS method.
- 2) From the selected Dong/Eup/Myuns, the secondary sampling units (Tong/Ban for Dong, and Li for Myun) were randomly selected with the PPS method.
- 3) Within the selected Tong/Ban or Li, lists constructed the sampling frame using the traditional listing method or dependent listing method when a resident center’s household list is available. After receiving the completed sampling frame, the Survey Research Center randomly selects 12 or 13 households in each of the selected areas and sends the list of selected households to each School Survey Team Coordinator. ¹⁾
- 4) Interviewers visit the selected households in person, carefully list all adults 18 years of age and older within each selected household, and select an adult with the earliest birthday for the main interview. However, in 2006 and 2007, an adult member with the last birthday was selected for the main interview.

2016 - 2021

The 2016-2021 KGSS target population consists of non-institutionalized Korean speakers aged 18 years or older in Korea. Since the list of Korean speakers aged 18 and over was not readily available, we identified elements of the target population using the four-stage area probability sampling method.

1) Selection of PSUs

The primary sampling unit (PSU) for the 2016-2021 KGSS is a Dong, Eup, or Myon. We selected PSUs (2016 = 100, 2018/2021 = 200) with probability proportional to size.

1) KGSS Sampling frame Reference: Ku, M., Kim, S., Kim, H., & Kim, J. (2014). Creating the Household Sampling Frame: The Korean General Social Survey (KGSS). *Survey Research*, 15(4), 153-174.

A. Sampling Frame

The sampling frame was the list of Dong/Eub/Myon. There were 3,496 Dong/Eub/Myon in 2015 and 3,510 Dong/Eub/Myon in 2019.

B. Stratification and Sample Allocation

We explicitly stratified the frame to improve the efficiency of estimates considering potential geographic and urban/rural homogeneity. Required numbers of PSUs were independently selected from each KwangYok Si/Do. The PSUs were proportionally allocated to each KwangYok Si/Do based on the number of households. Let MOS_{ij} be the number of households in j^{th} Dong/Eub/Myon in i^{th} KwangYok Si/Do. Then, the allocated number (n_i) of PSUs for the i^{th} KwangYok Si/Do is

$$n_i = \text{Number of PSUs} (2016 = 100, 2018/2021 = 200) \times \frac{\sum_{j=1}^{N_i} MOS_{ij}}{\sum_{i=1}^{17} \sum_{j=1}^{N_i} MOS_{ij}}$$

where N_i is the number of Dong/Eub/Myon's in the i^{th} KwangYok Si/Do. Note that $\sum n_i = 100$ (2016 = 100, 2018/2021 = 200), and $\sum N_i = 3,496$, the total number of Dong/Eub/Myon's in Korea (ROK). The integral number of rounded n_i was used. <Table 3> shows stratum sizes and the allocated numbers of PSUs.²⁾

C. Selection

The required number of PSUs was systematically selected from the list of Dong/Eub/Myon's in each KwangYok Si/Do. The frame was sorted by KwangYok Si/Do and Gu/Gun before selecting samples. Details on the systematic selection method can be found in Cochran (1977), Kish (1965), and Sarndal, *et al.* (1992).

The inclusion probability, p_{ij} , of the j^{th} Dong/Eub/Myon in the i^{th} KwangYok Si/Do is

$$p_{ij} = n_i \times \frac{MOS_{ij}}{\sum_{j=1}^{N_i} MOS_{ij}}$$

2) Selection of SSUs

The secondary sampling unit (SSU) is defined as Tong/Ban (for Dong) or Li (for Myun). Each SSU is systematically selected from each selected PSU with probability proportional to size. Let MOS'_{ijk} be the number of households in k^{th} Tong/Ban/Ri in j^{th} Dong/Eub/Myon in i^{th} KwangYok Si/Do. The conditional selection probability, $p_{k \setminus ij}$, of the k^{th} Tong/Ban/Ri is

$$p_{k \setminus ij} = \frac{MOS'_{ijk}}{MOS_{ij}}$$

3) Selection of Households

After completing the sampling frame for each selected Tong/Ban, a fixed number (m) of HUs is systematically selected. The conditional selection probability, $p_{l \setminus kij}$ of the l^{th} HU of the selected

2) The allocated number of PSUs for Sejong Si is 0, which implies an exclusion of SeJong Si from KGSS 2016. To include SeJong Si in the Study, one unit is allocated to Stratum 8 (Sejong Si).

m HUs in k^{th} Tong/Ban/Ri in j^{th} Dong/Eub/Myon in i^{th} KwangYok Si/Do is

$$p_{l \setminus kij} = \frac{m}{MOS_{ijk}}$$

The overall unconditional selection probability of an HU is,

$$\begin{aligned} p_{ijkl} &= \text{Number of PSUs (2016 = 100, 2018/2021 = 200)} \times \frac{\sum_{j=1}^{N_i} MOS_{ij}}{\sum_{i=1}^{17} \sum_{j=1}^{N_i} MOS_{ij}} \times \frac{MOS_{ij}}{\sum_{j=1}^{N_i} MOS_{ij}} \times \frac{MOS_{ijk}}{MOS_{ij}} \times \frac{m}{MOS_{ijk}} \\ &= \text{Number of PSUs (2016 = 100, 2018/2021 = 200)} \times \frac{m}{\sum_{i=1}^{17} \sum_{j=1}^{N_i} MOS_{ij}} \end{aligned}$$

which is a constant number. That is, the 2016–2021 KGSS sample of HUs is an *epsem* (equal probability of selection method) sample.

4) Selection of Persons

In 2016 and 2021 KGSS, after compiling a list of adults 18 years or older for each selected household, an adult is selected using the last birthday method at the time of the interview. The total number of completed interviews was 1,051 in 2016 and 1,205 in 2021. In 2018, we used Kish Table to select a respondent for each household. The total number of completed interviews was 1,031.

3. Use of Data

1) Data Input and Processing

The Korean General Social Survey puts great efforts toward increasing data quality. Great care has to be taken in data collection and inputting, editing, coding, cleaning, and archiving data.

(1) Data Input and Cleaning

We checked each questionnaire thoroughly as soon as the completed questionnaires were collected. Then, a data input specialist entered the data. From 2016 to 2018, unlike the previous years, we created the final input data by separately inputting the data twice. If the two input data were not identical, the unidentical cases were rechecked against the original questionnaire and fixed. In 2021, unlike in previous years, a research company collected the 2021 KGSS. For this reason, the Center did not input the data but cleaned the data that the research company had provided.

From 2003 to 2018, we employed a paper-and-pencil interview(PAPI) method for data collection; however, in 2021, for the first time, we used both Tablet Assisted Personal Interview(TAPI) and Paper-and-pencil interview(PAPI) methods.

(2) Cleaning Methods

All the input data underwent a thorough cleaning process. From 2016 KGSS, when the respondent answered two correlated questions in a contradictory fashion, we have not fixed it because we could not figure out which one was an error. Furthermore, we saved and used a syntax file for the previous cleaning process to achieve consistency for cleaning repeated variables.

Individuals who participate in surveys provide sensitive information that demands confidentiality and privacy. We excluded the personal information that can identify respondents, such as name, address, company's name, etc. In addition, we decided not to release information about participants' small geographic areas other than the city/province. But researchers can access the geographic identification code under a special contract with SRC (<https://kgss.skku.edu/kgss/Geographic.do>).

2) Process of Industry and Occupation Classification

2003–2014

Industry and occupation coding was based on three open-ended questions: respondents and their spouses' industry and occupation (company name), job title, and job description (see Table 4). After collecting completed questionnaire, industry and occupation classifications were directly coded on the questionnaire and the result was entered by data input specialists. The coding process was completed via a one-time input. Industry and occupation variable names are Industry and OCC for respondents and SPIND and SPOCC for spouses.

<Table 4> Respondent and Spouses' Industries and Occupations, Job titles, and Job Descriptions.

56.1 Industry and Occupation

(Company name):

56.2 Job Title:

56.3 Job Description:

2016–2021

The Korean General Social Survey's industry and occupation classification in 2016–2018 was based on the Korea National Statistical Office's Korean Standard Industrial Classification (KSIC) and Korean Standard Classification of Occupations (KSCO). The KSCI usually classifies occupations based on the similarity of industrial activities, while the KSCO classify occupation based on what individual do for making their income (economic activity). An industry classification followed the KSIC of the Korean National Statistical Office, and occupation classification was grounded on the principle of occupation classification and notice of occupation classification system as well as the Statistics Training Institute's occupation classification education documents (2016).

We also used searching terms like "classification code," "explanation," "example," and "index word" in the KSIC and KSCO search engine of the Korean National Statistical Office's Statistical classification's website (https://kssc.kostat.go.kr:8443/ksscNew_web/index.jsp). In the statistical classification web commentary, if you input such terms, you can find the "classification code" and "classification name," while if the job is similar but not the same as the input occupation/industry, they indicate an "exception." The KGSS's industry and occupation classification basically refers to information from the Korea National Statistical Office and their commentary; however, we followed our own rules when we needed detailed facts and figures. According to the steps above, we finalized the industry and occupation codes. Industry classification is a 2 digit medium category and occupation classification consists of 4 digit and 5 digit categories in the KGSS.

Sometimes, it was not easy to categorize jobs and industries based on the respondent and spouse's industry, job title, and job description. As a result, information such as sex, age, education, income, and employment status was sought for industry and occupation coding. In 2018, industry and occupation coding was conducted in two steps. Two coders independently input industry and occupation coding values in the 1st industry occupation classification. Then, in the 2nd industry occupation classification, the third coder compared two independent coders' values in the 1st industry occupation classification and finalized it. For the sake of the consistent industry and occupation coding for all the years of the KGSS, we reclassified the industry and occupation classification from 2003 to 2014 to follow the standard of 2016–2018's industry and occupation classification.³⁾

3) Kim, ChangHwan, Jibum Kim, and Mihee Ban. (2020). "Do you know what you do for a living? Occupational coding mismatches between coders in the Korean General Social Survey." *Research in Social Stratification and Mobility* 70. <https://doi.org/10.1016/j.rssm.2019.100467>

61. What kind of industry does your father work in, and what did he do for a living when you were 16? Please be specific.

Probing

61.1 Industry and Occupation

(Company name):

61.2 Job Title :

61.3 Job Description:

___ (-1) Father passed away before 16

The 2021 KGSS Industry and occupation classification followed the same procedure as the 2016–2018 KGSS. The respondent and spouse’s industry and occupation coding were classified based on answers about the industry, job title, job description, sex, age, education attainment, income, employment status, and status of workers. For the first time, respondents were asked to answer their father’s industry and occupation when they were 16. Coding for a father’s industry and occupation was based on industry, job title, job description, and education.

Calculation of Weights for KGSS 2003 – 2021

From 2003 to 2014, with an exception of 2012, there were no weights in KGSS. KGSS started to provide weights for all-year analyzing in 2016(VAR: FINALWT). The current document describes the methods for the calculation of weights for KGSS 2003 – 2021 survey data.

Let $W_{1,i}$ be the initial weight for the i^{th} sample adult of each annual sample. Sample housing units were selected with equal probability for each annual survey. An adult (18 and over) was randomly selected from eligible adults within each household [Cite Sampling Report]. Therefore, $W_{1,i}$ is.

$$W_{1,i} = E,$$

where E is the number of eligible adults in each selected household, an inverse of within-household selection probability.⁴⁾

In the absence of non-response and non-coverage, the initial weights ($W_{1,i}$) would be the weights of KGSS analyses. Post-stratification adjustment to the initial weight was done to correct potential non-response bias and coverage errors. Post-stratification adjustment cells were constructed using the following 4 variables with specific categories:

Gender (Male, Female)

Age (18–29, 30–39, 40–49, 50–59, 60 and over)

Region (Seoul, Kyunggi, Kangwon/Jeju, Chungchong, Kyungsang, Cholla)

Urbanicity (Urban, Rural).

For each year, let T_{jklm} be a population total for a combination of gender, age, region, and urbanicity. The post-stratified weights, $W_{2,ijklm}$ of the i^{th} person within cell (j,k,l,m) is.

4) There were 17 one-person households with missing age for the 2003–2021 surveys. A value of one was assigned to the missing number of adults for the 17 households. For a few multiple-person households with household members without age for the 2003–2016 surveys, the value is the count of adults with valid age values.

$$W_{2.ijklm} = W_{1.ijklm} \frac{T_{ijklm}}{\sum_i W_{1.ijklm}}$$

If the 4-way tables for the population totals were available and the number of completed interviews for each annual KGSS was large enough to support the 4-way tables (*i.e.*, each cell size is sufficiently large, *e.g.*, 20), we could create the post-stratified weights using the above formula. However, we decided to use an alternative method (*iterative proportional fitting procedure* or *raking method*) for post-stratification adjustment to the initial weights after considering the sparseness of 4-way cross-tabulation and the availability of the corresponding population distribution.

The method of raking is to find the population counts, T_{ijklm}^* , by an iterative proportional fitting procedure under marginal constraints:

$$\begin{aligned} T_{j++++}^* &= \sum_k \sum_l \sum_m T_{ijklm}^* = T_{j++++}, \quad j=1, \dots, J \\ T_{+k+++}^* &= \sum_j \sum_l \sum_m T_{ijklm}^* = T_{+k+++}, \quad k=1, \dots, K \\ T_{++l+}^* &= \sum_j \sum_k \sum_m T_{ijklm}^* = T_{++l+}, \quad l=1, \dots, L \\ T_{+++m}^* &= \sum_j \sum_k \sum_l T_{ijklm}^* = T_{+++m}, \quad m=1, \dots, M \end{aligned}$$

The marginal population distributions of Sex, Age, Region, and Urbanicity were obtained from the Census. <Table 5> shows the population distributions for adults aged 18 and over. There are three columns of census distributions for 2005, 2010, 2015, and 2020. The distributions for 2005 are “control totals” for 2003 - 2005 KGSS. Similarly, as shown in <Table 5>, the distributions for 2010, 2015, and 2020 are the control totals for respective KGSS annual survey.

At the first step, the estimators are,

$$T_{ijklm}^{(1)} = n_{ijklm} \frac{T_{j++++}}{n_{j++++}},$$

where n_{ijklm} is the number of completed interviews in the cell (j,k,l,m) . Note that $\sum_j \sum_k \sum_l \sum_m n_{ijklm} = n$, the number of completed interviews for each year.

Then, the next estimators are

$$T_{ijklm}^{(2)} = T_{ijklm}^{(1)} \frac{T_{+k+++}}{T_{+k+++}^{(1)}},$$

and so on until converge. The iterative proportional fitting procedure was first introduced by Deming and Stephan (1940), and more details can be found in Bishop, Fienberg, and Holland (1975), Fienberg (1980), and Little and Rubin (1987).

Before the computation of the weights began, we randomly imputed values for 21 missing values

for 2003 - 2021 surveys for Age variable with probabilities proportional to observed distributions.

The “raked” weights, $W_{2,i}$, for the i^{th} person in cell (j,k,l,m) is

$$W_{2,ijklm} = W_{1,ijklm} \frac{T_{ijklm}^*}{\sum_i W_{1,ijklm}}$$

The final weights, $W_{3,i}$, were “normalized” as

$$W_{3,i} = W_{2,i} \frac{n}{\sum_i W_{2,i}},$$

or

$$\sum_i^n W_{3,i} = n$$

That is, the sum of the final weights for each survey is equal to the number of completed interviews.

Table 423 Opportunities to have contacts with the elderly

[Questionnaire] Do you happen to have contacts with the elderly? Or Have you ever had such contacts in the past?

Please answer this question with thinking of the most primary relationship to you. If you think you are an elderly yourself, then please answer as one of the same generation.

[VAR] ELDCT

Table 796 Voting is a duty

[Questionnaire] There are many different opinions about participating in elections. Some believe you must vote even if you don't like any given candidates or parties, because voting is a rightful duty of a democratic citizen. On the other hand, some believe voting is a choice given to a democratic citizen so it's okay to vote or not depending on how much you like the candidates or the parties. Which statement would be closer to your opinion?

[VAR] VOTEDUTY

Table 814 Which person R want to limit candidacy (A type)

[Questionnaire] According to the Public Official Election Act of the Republic of Korea, anyone can run for election, except those who were found financially incompetent, who received a sentence of imprisonment, imprisonment without prison labor, or who received a more serious sentence; who have not completed their sentences, and who have been suspended to run for elected office by the court,. Therefore, the people shown in <Example> can run for election. If the Public Official Elections Act is amended, do you want to prevent any of the following candidates from running? You do not need to tell us specifically about each person; just let us know the number of people you want to limit candidacy... Homosexuals, chaebol chairpersons, religious clergymen (Protestant reverends, Buddhist monks, or Catholic priests), trade union leaders, naturalized immigrants

Table 1636 Estimate on the income of a skilled worker in a factory

[Questionnaire] I would like to know what you think people in these jobs actually earn. Please write how much you think they usually earn each month before taxes. Many people are not exactly sure about this. Your best guess will be close enough. This may be difficult, but it is very important. So please try. (ASK ALL QUESTIONS ABOUT ACTUAL INCOME OF THE FOLLOWING OCCUPATIONS, THEN ASK Q.86.)... A skilled worker in a factory

earns?
